10 preguntas (44–53) · 5 secciones (A–E), que pueden repetirse · 1 punto por pregunta · tiempo orientativo: 18 minutos · sin consultar la teoría

You are going to read an article about Britain's hedgerows. For questions 44–53, choose from the sections (**A–E**). The sections may be chosen more than once. Mark your answers on the answer sheet.

In which section does the writer

44 endorse a traditional practice in spite of its cost?

45 describe an outing that changed their view of hedges?

46 point out a gap in the legal protection of hedges?

47 question the value of a recent burst of enthusiasm?

48 question the reliability of a technique for estimating age?

49 compare hedges to a kind of written record?

50 give an example of poor survival among new plantings?

51 acknowledge that a damaging policy had a sensible motive?

52 mention plants that indicate where a hedge came from?

53 contrast two ways of cutting hedges?

Lines on the land

Britain's hedgerows are older, richer and more contested than they look.

A For most of my life I gave hedges about as much thought as I gave fences. They were what you drove between on the way to somewhere else: green, untidy and, as far as I could tell, interchangeable. It took a winter walk with a retired surveyor in Herefordshire to change that. Every few hundred yards he would stop, part the branches and tell me roughly how old the hedge was, what it had once divided and, occasionally, who had gone to court over it. Some of the hedges we passed, he said, were older than the parish church. By the end of the afternoon I had begun to see them as he did: not as scenery but as documents, written in hawthorn and hazel, recording centuries of argument about who owned what.

B The oldest hedges were never planted at all. When medieval farmers cleared woodland, they sometimes left a strip standing to mark a boundary, and those strips survive in places as hedges full of woodland plants such as bluebells and dog's mercury. Most hedges in the English Midlands, by contrast, date from the Parliamentary enclosures of the late eighteenth and early nineteenth centuries, when open fields were divided up and planted, often with hawthorn alone. In the 1970s the ecologist Max Hooper proposed a rule of thumb for dating them: count the woody species in a thirty-yard stretch, and allow roughly a century for each. It is an appealing idea, and it works often enough to be useful. But it assumes that hedges acquire species slowly, and a hedge planted with a mixture from the start can look several hundred years older than it is.

C For a generation after the Second World War, hedges were in the way. Farmers were encouraged, and for a time paid, to grub them up so that larger fields could be worked by larger machines, and by some estimates around half of Britain's hedgerows disappeared in the decades that followed. The policy made sense on its own terms: a country that had come close to running out of food in wartime was determined to grow more of its own. By the 1990s the mood had changed, and the Hedgerows Regulations of 1997 required landowners in England and Wales to notify their local council before removing most countryside hedges, and allowed the council to forbid the removal of any it judged important. The regulations have undoubtedly saved hedges. Yet they say nothing at all about how a hedge is treated while it stands, and a hedge can be ruined as thoroughly by careless cutting as by a bulldozer.

D What a hedge is worth to wildlife depends less on its age than on how it is managed. The commonest method today is to trim it every year with a tractor-mounted flail, usually in late summer, which leaves a neat box that is easy to drive past and of little use to anything that needs to eat. Hawthorn flowers on the previous year's growth, so a hedge cut back every year produces little blossom and few berries. Cut every two or three years, in late winter, the same hedge can feed insects in spring and birds through the cold months. The older technique of laying, in which the stems are partly cut through and bent over so that they regrow thickly from the base, is slower still, and costly. Its few remaining practitioners argue that it is the best way to keep an old hedge alive for another century, and it is a claim I have come to find persuasive.

E Planting has become fashionable again. Governments, charities and companies now compete to announce how many miles of new hedge they will create, and the announcements make cheerful reading. I am less cheered by what happens afterwards. A newly planted hedge is a row of whips in plastic guards, and for its first few years it needs weeding, watering and protection from rabbits and deer, none of which makes for a good photograph. When I visited a scheme planted with some ceremony five years ago, I found that more than a third of the saplings had died. A hedge, as the surveyor told me on that first walk, is not something you plant but something you keep, and the new targets will mean little unless someone is paid to do the keeping.

Hoja de respuestas

Marca una sola letra por pregunta; la misma letra puede repetirse. Al corregir, 1 punto por acierto; los errores no restan. Anota también el tiempo empleado: el objetivo en el examen son unos 18 minutos.

SOLUCIONES

1 punto por acierto. Cada solución da una línea del texto para cada elemento de la pregunta y, cuando hay una sección tentadora, explica por qué falla y de qué tipo es (los tipos de distractor de RDG-P5 §7). Los demás números de sección remiten a RDG-P7_Teoria_v1.

Clave rápida

Nº	Clave	Elementos	Tentadora	Teoría

Reparto de claves: A 2 · B 2 · C 2 · D 2 · E 2. Cada sección es la respuesta de al menos una pregunta.

Explicación por pregunta

44 · D

Pregunta: In which section does the writer endorse a traditional practice in spite of its cost?

Elementos (2), cada uno con su línea:

1. Práctica tradicional y costosa: The older technique of laying, que is slower still, and costly.
2. La respalda: it is a claim I have come to find persuasive.

Tentadora: E (medio cierto, RDG-P5 §7.6). También pide gastar dinero (unless someone is paid to do the keeping), pero en cuidar los setos nuevos, que no es ninguna práctica tradicional.

Teoría: §4.1 Preguntas de uno y de dos elementos · §3.3 Prever la paráfrasis

45 · A

Pregunta: In which section does the writer describe an outing that changed their view of hedges?

Elementos (2), cada uno con su línea:

1. Salida: It took a winter walk with a retired surveyor in Herefordshire to change that.
2. Cambio de visión: antes, I gave hedges about as much thought as I gave fences; después, I had begun to see them as he did.

Tentadora: E (medio cierto, RDG-P5 §7.6). Hay una visita (When I visited a scheme planted with some ceremony five years ago), pero confirma lo que ya pensaba (I am less cheered by what happens afterwards); no le cambia la opinión.

Teoría: §4.1 Preguntas de uno y de dos elementos · §3.4 Señales de postura y de cambio

46 · C

Pregunta: In which section does the writer point out a gap in the legal protection of hedges?

En el texto: Tras el giro: Yet they say nothing at all about how a hedge is treated while it stands.

Tentadora: E (no responde, RDG-P5 §7.2). Señala una carencia (the new targets will mean little), pero de unos objetivos de plantación, no de la protección legal de los setos.

Teoría: §3.4 Señales de postura y de cambio · §5.2 Un texto dividido en secciones

47 · E

Pregunta: In which section does the writer question the value of a recent burst of enthusiasm?

Elementos (2), cada uno con su línea:

1. Entusiasmo reciente: Planting has become fashionable again.
2. Duda de su valor: I am less cheered by what happens afterwards; the new targets will mean little unless someone is paid to do the keeping.

Tentadora: B (medio cierto, RDG-P5 §7.6). Duda de una idea atractiva (It is an appealing idea), pero es una regla de los años setenta, no un entusiasmo reciente.

Teoría: §4.1 Preguntas de uno y de dos elementos · §3.3 Prever la paráfrasis

48 · B

Pregunta: In which section does the writer question the reliability of a technique for estimating age?

Elementos (2), cada uno con su línea:

1. Técnica para datar: a rule of thumb for dating them.
2. Duda de su fiabilidad: a hedge planted with a mixture from the start can look several hundred years older than it is.

Tentadora: A (medio cierto, RDG-P5 §7.6). El agrimensor también calcula edades (tell me roughly how old the hedge was), pero el autor no pone en duda su método.

Teoría: §4.1 Preguntas de uno y de dos elementos · §3.4 Señales de postura y de cambio

49 • A

Pregunta: In which section does the writer compare hedges to a kind of written record?

En el texto: not as scenery but as documents, written in hawthorn and hazel.

Teoría: §1.3 Cómo se formulan las preguntas · §3.3 Prever la paráfrasis

50 • E

Pregunta: In which section does the writer give an example of poor survival among new plantings?

En el texto: more than a third of the saplings had died.

Tentadora: C (no responde, RDG-P5 §7.2). Habla de pérdidas (around half of Britain's hedgerows disappeared), pero de setos antiguos arrancados a propósito, no de plantaciones nuevas que no prosperan.

Teoría: §3.2 Anclas · §4.3 La sección tentadora

51 • C

Pregunta: In which section does the writer acknowledge that a damaging policy had a sensible motive?

Elementos (2), cada uno con su línea:

1. Política dañina: Farmers were encouraged, and for a time paid, to grub them up.
2. Motivo sensato: The policy made sense on its own terms.

Tentadora: D (medio cierto, RDG-P5 §7.6). Describe una práctica dañina con una ventaja práctica (a neat box that is easy to drive past), pero no es una política, y el autor no le reconoce sentido.

Teoría: §4.1 Preguntas de uno y de dos elementos · §5.2 Un texto dividido en secciones

52 • B

Pregunta: In which section does the writer mention plants that indicate where a hedge came from?

En el texto: hedges full of woodland plants such as bluebells and dog's mercury, restos del bosque talado.

Tentadora: A (eco léxico, RDG-P5 §7.1). Nombra plantas, pero dentro de una metáfora (written in hawthorn and hazel); no dicen nada del origen de ningún seto.

Teoría: §3.2 Anclas · §4.3 La sección tentadora

53 • D

Pregunta: In which section does the writer contrast two ways of cutting hedges?

En el texto: trim it every year with a tractor-mounted flail frente a Cut every two or three years, in late winter.

Tentadora: C (eco léxico, RDG-P5 §7.1). Habla de cortar (careless cutting), pero lo compara con arrancar el seto (as by a bulldozer), no con otra forma de cortarlo.

Teoría: §1.3 Cómo se formulan las preguntas · §5.2 Un texto dividido en secciones
